EXPERIENCE

Software Engineer, NCS Jul 2024 – Present

Logistics management platform for a government defence client: React micro-frontends over Spring Boot.

- Build features in React and TypeScript (Redux Toolkit, Ant Design) across several micro-frontend apps, including pages built around embedded Qlik dashboards, plus light backend debugging and data preparation on the Spring Boot side.
- Built and extended several reusable React components in the team's shared Storybook library, such as paginated, user-configurable tables.
- Cut validation of a 1 GB file set from about an hour to about 15 minutes in a Spring Boot CLI application, and reworked it with its original developer so rules are configurable parts, letting it take a second, more conditional rule set.
- Deployed the platform to Windows servers at the client's military camps: configured IIS, TLS certificates, database access and firewall rules, moved the backend services from NSSM to WinSW, and automated the setup with PowerShell. Debugged configuration and connectivity issues on site.

Software Engineer Intern, NCS May – Aug 2023

Wrote JUnit and Mockito tests for Spring Boot modules ahead of a migration to a new architecture.

Software Engineer Intern, Continental Automotive Singapore Jan – Apr 2023

Built an Angular dashboard for monitoring bus-driver health and performance, with engineers in Germany.

PROJECTS

Spendulu React, TypeScript, Python, LLM API · built with Claude Code

Expense tracker for Singapore, where banks have no open-banking API. Imports PDF statements from five local issuers and asks an LLM to categorise unfamiliar shops, sending only the merchant name.

LaparoLymph Unity, C#, VR

VR surgical trainer built with Duke-NUS Medical School and Singapore General Hospital for my final-year project. Wrote all of the software in a team of seven; demoed to surgeons.

EDUCATION

Singapore University of Technology and Design, B.Eng, Computer Science and Design 2020 – 2024

NUS-ISS, Graduate Certificate, Designing Modern Software Systems 2025

Professional Scrum Developer I (PSD I)

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux Toolkit, Ant Design, Storybook, Angular
Backend: Java, Spring Boot, SQL, REST APIs, Python
Testing: Jest, React Testing Library, JUnit, Mockito
Tools: Git, PowerShell, IIS, Windows Server
