EXPERIENCE

Software Engineer, NCS Jul 2024 – Present

Logistics management platform for a government defence client: React micro-frontends over Spring Boot.

- Build features in React and TypeScript (Redux Toolkit, Ant Design) across several micro-frontend apps, including pages built around embedded Qlik dashboards.
- Built and extended several reusable components in the team's shared Storybook library, including new features for the shared data table.
- Cut validation of a 1 GB file set from about an hour to about 15 minutes in a Spring Boot CLI application by redesigning how files are read and processed, including parallel batch reads and a custom buffered reader.
- Reworked the same application with its original developer so rules are assembled from configurable parts, which let it take on a second, more conditional rule set.
- Deployed the platform to on-premise Windows servers: configured IIS, TLS certificates, database access and firewall rules, moved the backend services from NSSM to WinSW, and automated the setup with PowerShell. Debugged configuration and connectivity issues on client sites.

Software Engineer Intern, NCS May – Aug 2023

Wrote JUnit and Mockito tests for Spring Boot modules ahead of a migration to a new architecture.

Software Engineer Intern, Continental Automotive Singapore Jan – Apr 2023

Built an Angular dashboard for monitoring bus-driver health and performance, with engineers in Germany.

PROJECTS

Spendulu React, TypeScript, Python, local LLM · built with Claude Code

Expense tracker for Singapore, where banks have no open-banking API. Imports PDF statements from five local issuers and uses a local LLM to categorise unfamiliar shops, without ever letting it change an amount.

LaparoLymph Unity, C#, VR

VR surgical trainer built with Duke-NUS Medical School and Singapore General Hospital for my final-year project. Wrote all of the software in a team of seven; demoed to surgeons.

EDUCATION

Singapore University of Technology and Design, B.Eng, Computer Science and Design 2020 – 2024

NUS-ISS, Graduate Certificate, Designing Modern Software Systems 2025

Professional Scrum Developer I (PSD I)

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux Toolkit, Ant Design, Storybook, Module Federation, Angular

Backend: Java, Spring Boot, SQL, REST APIs, Python

Testing: Jest, React Testing Library, JUnit, Mockito

Tools: Git, PowerShell, IIS, Windows Server
