EXPERIENCE

Software Engineer, NCS Jul 2024 – Present

Logistics management platform for a government defence client: React micro-frontends over Spring Boot.

- Build features in React and TypeScript (Redux Toolkit, Ant Design) across several micro-frontend apps, including pages around embedded Qlik dashboards, where I fixed filters being lost between pages.
- Added server-side pagination to the shared table component, now used by every app, and built saved column layouts that other teams are moving onto.
- Cut validation of a 1 GB file set from about an hour to about 15 minutes in a Spring Boot CLI application, using parallel batch reads, a custom buffered reader, and hashing each file during the read instead of in a separate pass.
- Reworked the same application with its original developer so rules are assembled from configurable parts, which let it take on a second, more conditional rule set.
- Deployed the platform to on-premise Windows servers (certificates, database scripts, firewall rules, IIS, Spring Boot services), wrote PowerShell scripts to automate the setup, and debugged configuration and connection issues on client sites.

Software Engineer Intern, NCS May – Aug 2023

Wrote JUnit and Mockito tests for Spring Boot modules ahead of a migration to a new architecture.

Software Engineer Intern, Continental Automotive Singapore Jan – Apr 2023

Built an Angular dashboard for monitoring bus-driver health and performance, with engineers in Germany.

PROJECTS

Spendulu React, TypeScript, Pyodide, Web Workers · built with Claude Code

Personal-finance app that reads PDF bank statements in the browser. The Python parsing engine runs in a Web Worker through Pyodide, so statements never leave the device.

LaparoLymph Unity, C#, VR

VR surgical trainer built with Duke-NUS Medical School and Singapore General Hospital for my final-year project. Wrote all of the software in a team of seven; demoed to surgeons.

EDUCATION

Singapore University of Technology and Design, B.Eng, Computer Science and Design 2020 – 2024

NUS-ISS, Graduate Certificate, Designing Modern Software Systems 2025

Professional Scrum Developer I (PSD I)

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux Toolkit, Ant Design, Storybook, Module Federation, Angular
Backend: Java, Spring Boot, SQL, REST APIs, Python
Testing: Jest, React Testing Library, JUnit, Mockito
Tools: Git, PowerShell, IIS, Windows Server
